CLAIMS

WHAT IS CLAIMED IS:

- 1. An integrated system comprising:
 - a portal;
 - a server communicating with said portal;
- at least one wireless local area network in communication with said server;
- at least one mobile platform in wireless communication with said at least one wireless local area network; and
- a means for enabling two-way communications between said portal and said server.
- The integrated system of claim 1, wherein said portal may be accessed by at least one electronic device in communication with said portal.
- The integrated system of claim 1, wherein said at least one local area network is physically integrated with said server.
- 4. The integrated system of claim 1, wherein said at least one local area network is in wireless communication with said server.
- The integrated system of claim 1, wherein said at least one mobile platform comprises a PC tablet.
- 6. The integrated system of claim 1, further comprising a borescope and said borescope being in communication with said mobile platform.
- 7. The integrated system of claim 6, wherein said borescope communicates with said at least one mobile platform via a data feed wire.

- 8. The integrated system of claim 7, wherein said at least one mobile platform comprises at least one USB port for receiving said data feed wire.
- The integrated system of claim 2, wherein said at least one electronic device comprises a stereographic viewing system.
- 10. The integrated system of claim 9, further comprising a stereo image lens in communication with said at least one mobile platform.
- 11. The integrated system of claim 10, wherein said at least one mobile platform comprises at least one USB port for receiving data from said stereo image lens.
- 12. The integrated system of claim 1, wherein said server is addressable by a unique IP address and wherein said server hosts at least one web page.
- 13. The integrated system of claim 1, wherein said server is located on a moveable platform.
- 14. A method for providing remote, interactive visual analysis of an apparatus, comprising the steps of:

providing a portal, said portal in communication with at least one electronic device;

providing a server in two-way communication with said portal via the internet;

integrating said server into a wireless local area network;

connecting at least one mobile platform to said local area network:

providing visual data from at least one visual device to said at least one mobile platform; and

receiving said visual data at said at least one electronic device.

- 15. The method of claim 14 comprising the additional step of issuing control commands to said at least one visual device from said at least one electronic device.
- 16. The method of claim 15, wherein said control commands are issued in response to receiving said visual data by said at least one electronic device.
- 17. The method of claim 16, further comprising altering an orientation of said visual device in accordance with said control commands.
- 18. The method of claim 14, wherein said receiving of said visual data is limited by a community affiliation of said one or more electronic devices.
